For Immediate Release

Deployable 3U VPX Server Boards

May 2018 – Concurrent Technologies completes qualification on 3U VPX rugged server boards

Figure 1: TR C4x/3sd-RCx Rugged Server

Concurrent Technologies, a leading supplier of processor solutions for demanding environments, has completed thermal, shock and vibration qualification testing and is shipping conduction-cooled ruggedized server boards with virtualization capabilities. The 12-core variants of these 3U VPX™ boards will operate at a card edge temperature of +85°C with 100% processor loading, maximizing performance within a single slot. 10 Gigabit Ethernet connectivity and direct attached storage are also included to minimize Size, Weight and Power (SWaP) which is vital for many compute intensive applications within the defense market.

Figure 2: TR G4x/3sd-RCx with 1TB Storage

Both TR C4x/3sd-RCx and TR G4x/3sd-RCx are based on the Intel® Xeon® D-1500 processor family. Concurrent Technologies builds variants with up to 16-cores and 64GB of soldered down DDR4 ECC DRAM for resilience against shock and vibration effects. For mass storage, all boards support an optional 128GB SATA Flash disk drive. Some variants can also be fitted with up to 1TB of direct attached storage, achieved by adding one or two M.2 modules maintaining the single slot solution. Concurrent Technologies has qualified suitable M.2 modules and is supplying these factory-fitted.

Concurrent Technologies offers a number of security options including TPM 2.0, Secure Boot, Sanitization Utilities and our Guardian Package for enhanced security which can also be tailored to meet bespoke security requirements.

Glen Fawcett, CEO of Concurrent Technologies, commented: “Our focus was to design these boards to optimize server performance for extreme environments and to minimize our SWaP characteristics. Having completed the necessary qualifications, we are now selling class leading, single slot server products that are capable of operating at full processor loading irrespective of the card edge temperature.”

Concurrent Technologies is an international ISO 9001:2015 company specializing in the design and manufacture of commercial-off-the-shelf and custom designed industrial computer boards for critical embedded applications. The company, which was founded in 1985, has offices in the USA, UK, India and China as well as a worldwide distributor network. The company has a wide range of high performance Intel® processor based VME, VPX™, CompactPCI® and AdvancedMC® products, which are complemented by an extensive offering of XMC (Express Mezzanine Card) products. Concurrent Technologies is an Affiliate member of the Intel Internet of Things Solutions Alliance, a global ecosystem of 400+ member companies that provide scalable, interoperable solutions that accelerate deployment of intelligent devices and end-to-end analytics.
