

## NEWS MIPROLAB

Hotzone Solutions (HZS) is once again strengthening its expert position in the CBRN field forming a strategic partnership with 'miprolab Mikrobiologische Diagnostik GmbH Germany'. ([link to www.miprolab.com](http://www.miprolab.com))

This new cooperation agreement allows HZS to further increase and diversify its training capabilities and services in the field of CBRN biological countermeasures, so to be always able to customize its services and meet each customer's needs.

miprolab offers a broad range of products and services for microbiological diagnosis and detection. Services cover the production of toxins, the toxicological and microbiological analyses of your samples and the development and production of rapid assays for metabolites, toxins and infectious agents.

As of 2013 HZS will incorporate miprolab's rapid tests for the detection of biological threat agents in its training courses. Besides the simple handling and the read-out by the naked eye, an essential advantage of the rapid test is the timely test result, which is important for the on-site detection in the field. miPROTECT® test systems are intended for the on-site-detection in the field and are equally suitable for military as well as for civil protection units.

In its continuous effort to provide world class CBRNE training solutions around the globe, together miprolab and HZS offer a complete solution either in terms of consultancy, capability development, training or delivery of capability across the biological threat spectrum.
