ARMOUR
mobility

TSS Specialities

ARMOUR *mobility*

TSS International provides high-level expertise in vehicle security solutions and combines high service with unique products, all aimed at keeping special vehicles moving and their passengers safe and secure.

SPECIALITIES

Téléflow, Central Tyre Inflation System made easy!

Control your tyre pressure from within your cabin, while on the move, with this highly customisable, user friendly system!

TSS universal Tyre Bead Spreader. The perfect assistant for fitting Rodgard Runflat systems.

Certain types of tyres have inflexible and hard side walls, which can make fitting a runflat system difficult. The TSS Tyre Bead Spreader helps create working space and increase safety and comfort.

Hutchinson Tyre Shield increases tyre life cycle.

The side walls of your tyres are the most vulnerable and irreparable part of your tyre. Protect them from sharp objects with the Hutchinson Tyre Shield, and start cutting costs instead of your tyres!

B&G Electronics

High Powered Intercom Systems. Emergency Lights and more.

B&G Electronics

Dual Battery Charge Control. The ideal solution that automatically and intelligently controls the charge and the load management of both batteries in your vehicle.

Rodgard SecureBand the low cost, high value wheel safety system.

Having a tyre puncture is never convenient, especially while you are driving. Rodgard SecureBand blocks the wheel well and helps you keep control over the vehicle, reduce speed and get to a safe stopping place. Simple and effective!

Rock Monster Wheels: Minimise pressure, Maximise traction.

Off-road driving requires low tyre pressure. Hutchinson 2-piece Rock Monster Wheels with internal bead lock allow you to go as low as 0.8 bar with the tyre secured in place.

Skydex Convoy Deck

Reduce vehicle occupant injuries for example during IED attacks. Made to measure interior shock absorption for armoured vehicles.

Provides mobility after blow-out for a crucial 5 kilometres!
