

News Feed

In July this year, we sent you an update about the JRZ Maxxis tyre with a 1800kg payload, designed especially for armoured vehicles. This tyre complied with EU regulations up until 31 October 2016.

As per 1 November, the legislation for tyre approvals has been changed, specifically on rolling resistance and -noise (R117). We are pleased to announce that the Dutch RDW has approved the JRZ-Bravo Maxxis HT770 on these and all other criteria! This means that this tyre meets every legislation for road worthiness. Worldwide approvals include a.o. DOT, GSO and now also E4 for Europe.

News Feed

Especially designed for the heavy weights of commercial armoured vehicles, this tyre offers a number of advantages over competing tyres:

- The unique 1800kg payload
- Less rolling noise and vibrations
- Up to 25% more effective braking
- Up to 20% less wear and tear

In addition to that, the H/T (Highway/Terrain) profile allows for use on- and off-road.

This tyre (275/70R18) is available at TSS International BV.
